WALLTITE[®]

Plan to Use Purple

Improve the Comfort and
Energy Efficiency of Your Home

WALLTITE®

WANT TO IMPROVE THE COMFORT AND ENERGY EFFICIENCY OF YOUR HOME?

Achieve year-round comfort in your home today. WALLTITE® is the purple spray foam insulation designed to effectively keep your home warm in the winter and cool in the summer. With WALLTITE you can have a durable, well-sealed home, and less indoor dust & allergens. By improving the energy efficiency of your home, WALLTITE is an ideal cost saving solution.

BENEFITS

INCREASES COMFORT IN THE HOME

WALLTITE creates an effective air barrier, reducing air leakage, resulting in improved comfort and energy savings.

SAFE, PROFESSIONAL INSTALLATION

BASF provides training programs and a unique Site Quality Assurance Program (SQAP) to ensure correct installation and technical support for our spray foam. Qualified installers are certified by the third-party certification organization, Caliber QAP.

INCREASED DURABILITY

By virtually eliminating uncontrolled air leakage, the WALLTITE insulating air barrier system helps manage moisture movement, which decreases the risk of condensation, mould, ice damming, and increases the home's durability.

INSULATES HARD TO ACCESS AREAS

Spray applied, WALLTITE expands to fill gaps and cracks to provide a continuous air seal.

WALLTITE® IN THE ATTIC

The attic is an unconditioned (unheated) space and should be roughly the same temperature as the outside. Without the proper insulation and air sealing, heated air is escaping through your attic and cold air is entering from outdoors. WALLTITE applied in your attic will help control the flow of heat in and out of your roof space.

OFFERS HIGH ENERGY EFFICIENCY

Insulation levels are measured by R-value. R-value measures how well the material can resist heat flow. A high R-value means greater insulation performance.

PREVENTS ICE DAMMING

Ice damming is caused by heat escaping the roof and melting the snow that's collected there. The water runs down and refreezes to form a dam before it can drain through the eavestroughs.

STOPS THE GROWTH OF MOULD AND ROT

Excessive moisture can cause the growth of mould and rot which can lead to the severe damage to your home. WALLTITE controls the amount of moisture by creating a vapour barrier to stop moisture movement.

WALLTITE® IN THE BONUS ROOM

Most homes have a room above the garage that is often referred to as a bonus room. The bonus room can suffer from being too hot in the summer, and too cold in the winter. When the temperature of your bonus room starts to match the outdoor temperature, it's a sign of a problem with your insulation.

CONTROLS THE TEMPERATURE OF THE ROOM

WALLTITE between the floor and garage ceiling offers a high R-value and creates a warmer floor for the bonus room.

PREVENTS MOISTURE PROBLEMS

When warm and cold air meet in the walls, condensation can occur and lead to the formation of mould or mildew. WALLTITE can reduce this risk to create a safe and comfortable room.

WALLTITE® IN THE WALLS

WALLTITE helps your home stay warmer in the winter months and cooler in the summer. A poorly insulated wall allows air movement to compromise indoor temperatures. Apply WALLTITE to the interior or exterior of your walls to improve energy efficiency.

SAVE ON ENERGY COSTS

WALLTITE will help your home use less energy required for heating and cooling. This results in lower utility usage.

MAXIMUM INSULATING PERFORMANCE

WALLTITE has a high R-value per inch that provides space efficiency and saves valuable living space.

IMPROVED INDOOR AIR QUALITY

A better sealed house contributes to controlled humidity and less allergens inside the home.

SEALS GAPS AND CRACKS

The application of WALLTITE creates a seamless insulating layer with no joints or gaps.

WALLTITE® IN THE BASEMENT

Compared to other parts of your home, the basement tends to be cold and damp. Use WALLTITE insulation to create a more pleasant and comfortable living environment for your family.

WALLS

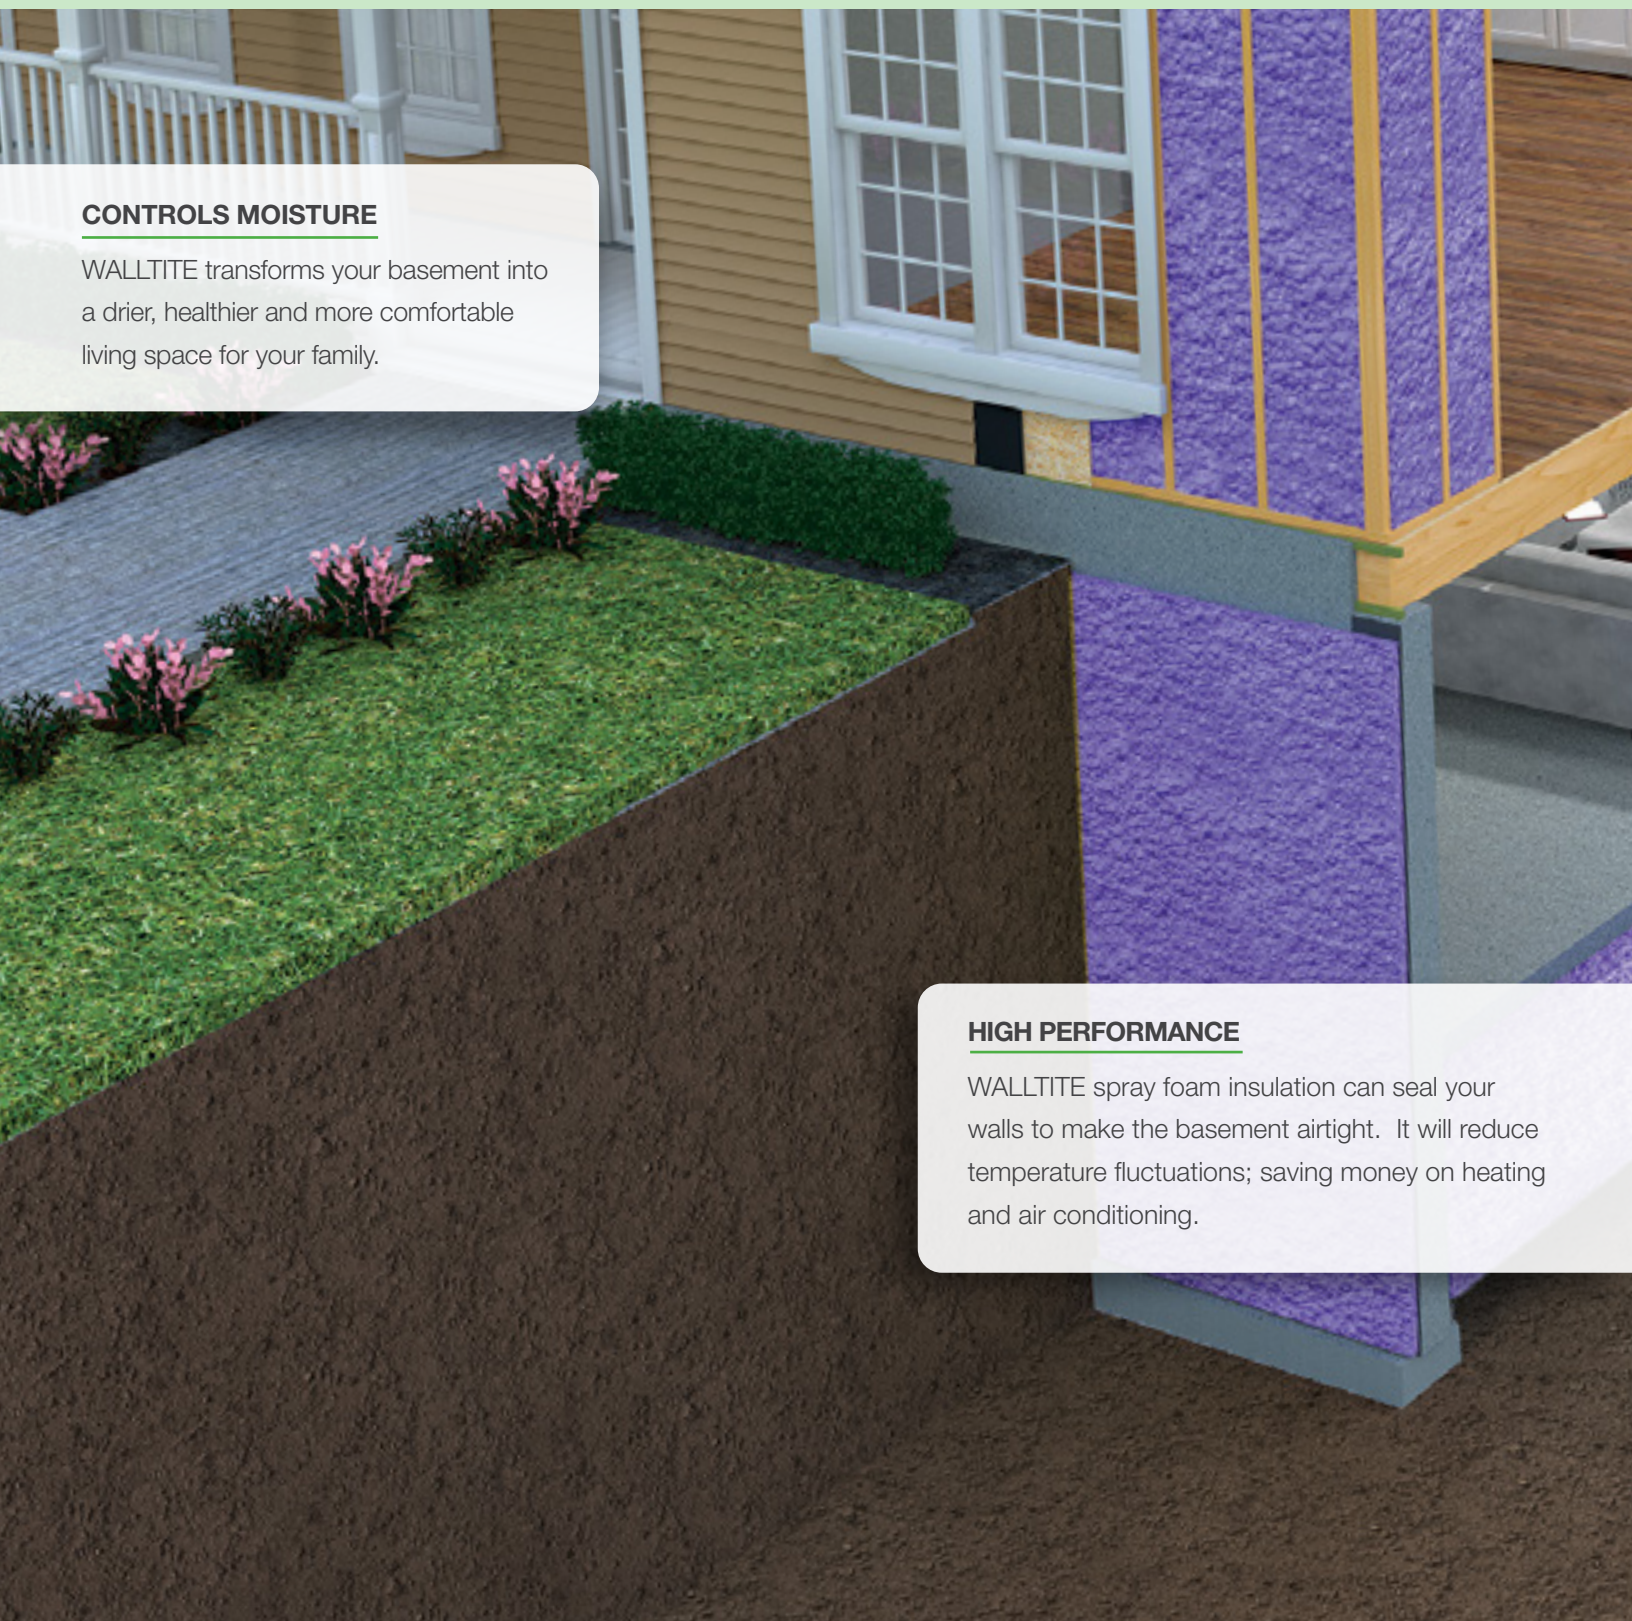

WALLTITE offers these solutions for your basement when applied to the wall:

CONTROLS MOISTURE

WALLTITE transforms your basement into a drier, healthier and more comfortable living space for your family.

HIGH PERFORMANCE

WALLTITE spray foam insulation can seal your walls to make the basement airtight. It will reduce temperature fluctuations; saving money on heating and air conditioning.

UNDER SLAB

Spray application of WALLTITE under your basement's slab helps to keep your family safe and healthy.

CONTROLS RADON AND SOIL GASES

Radon is a naturally occurring, radioactive gas that can enter from gaps and cracks in the foundation. WALLTITE CM01 has been tested by the Canadian Construction Material Centre (CCMC) as an effective barrier against the ingress of soil gases, such as radon, into your home when applied under the concrete slab.
